

KuBabyShark \$BSHARK

KuBabyShark Statement

Baby shark, a world renown kids jingle, released in 2016 from Korean Artist PinkFong. Since then it has accumulated more than 8 billion views on the YouTube Platform, becoming the MOST WATCHED VIDEO ON YOUTUBE EVER. Baby Shark is a big part of this shark family and is here present with us in the form of a cryptocurrency project representing its inheritance on the Kucoin Community Chain.

KuBabyShark offers an auto-liquidity generating mechanism, static rewards on every transaction and a marketing wallet allocation. It understands that coins that lose their marketing fundamentals loose in the long run as they are not able to put their unique tokenomics to the forefront. KuBabyShark solves this problem as it includes a 0.5% tax fee on each transaction directed to a marketing wallet essentially eliminating all marketing woes for a new cryptocurrency project. With auto-liquidity generated and static rewards being distributed each and every transaction, KuBabyShark combines game changing marketing essentials intermingled with the power of a Baby Shark fans around the world to make KuBabyShark.

Baby Shark becomes YouTube's most-watched video of all time

The KuBabyShark smart contract applies a 10% fee on all buy transactions and a 10-40% fee on all sells. Out of this, 50% is dedicated to buyback the contract to inject fuel growth.

The other 50% is dedicated to a team marketing wallet to help enhance the longevity and presence of the token at hand, ensuring the growth of the token to its investors, you all. This is extremely important as it secures your investment as well the future development of the project, forever onwards!

The liquidity fee will be 20% the first day, 14% the second day and 10% from then on. The redistribution fee will be 0% on the first two days and 2% from then on.

Tokens are redistributed to holders without the need for farming or staking! This means your \$BSHARK will automatically ACCUMULATE in your wallet simply for holding!

DYNAMIC BUYBACKS

$$\text{BUYBACK AMOUNT} = \text{BASE AMOUNT} * (1 + \frac{\text{DYNAMIC FEE} - \text{STATIC FEE}}{\text{STATIC FEE}} * K)$$

The Dynamic buy back essentially doesn't allow \$BSHARK token to be pump and dumped as it would be the case in the conventional manual buyback! Using dynamic buybacks the \$BSHARK contract will allow for longer, more organic and sustainable pumps. As well as acting as a deterrent for large sells. Whale dumps are punished not only by the dynamic fee but also by the buyback.

After a buyback occurs, the Liquidity fee will be lowered in favour of the redistribution fee. \$BSHARK has a settable fee ratio and a blackhole (burn) address allowing for huge rewards to holders while the contract accumulates KCS, getting ready for the next buyback to occur.

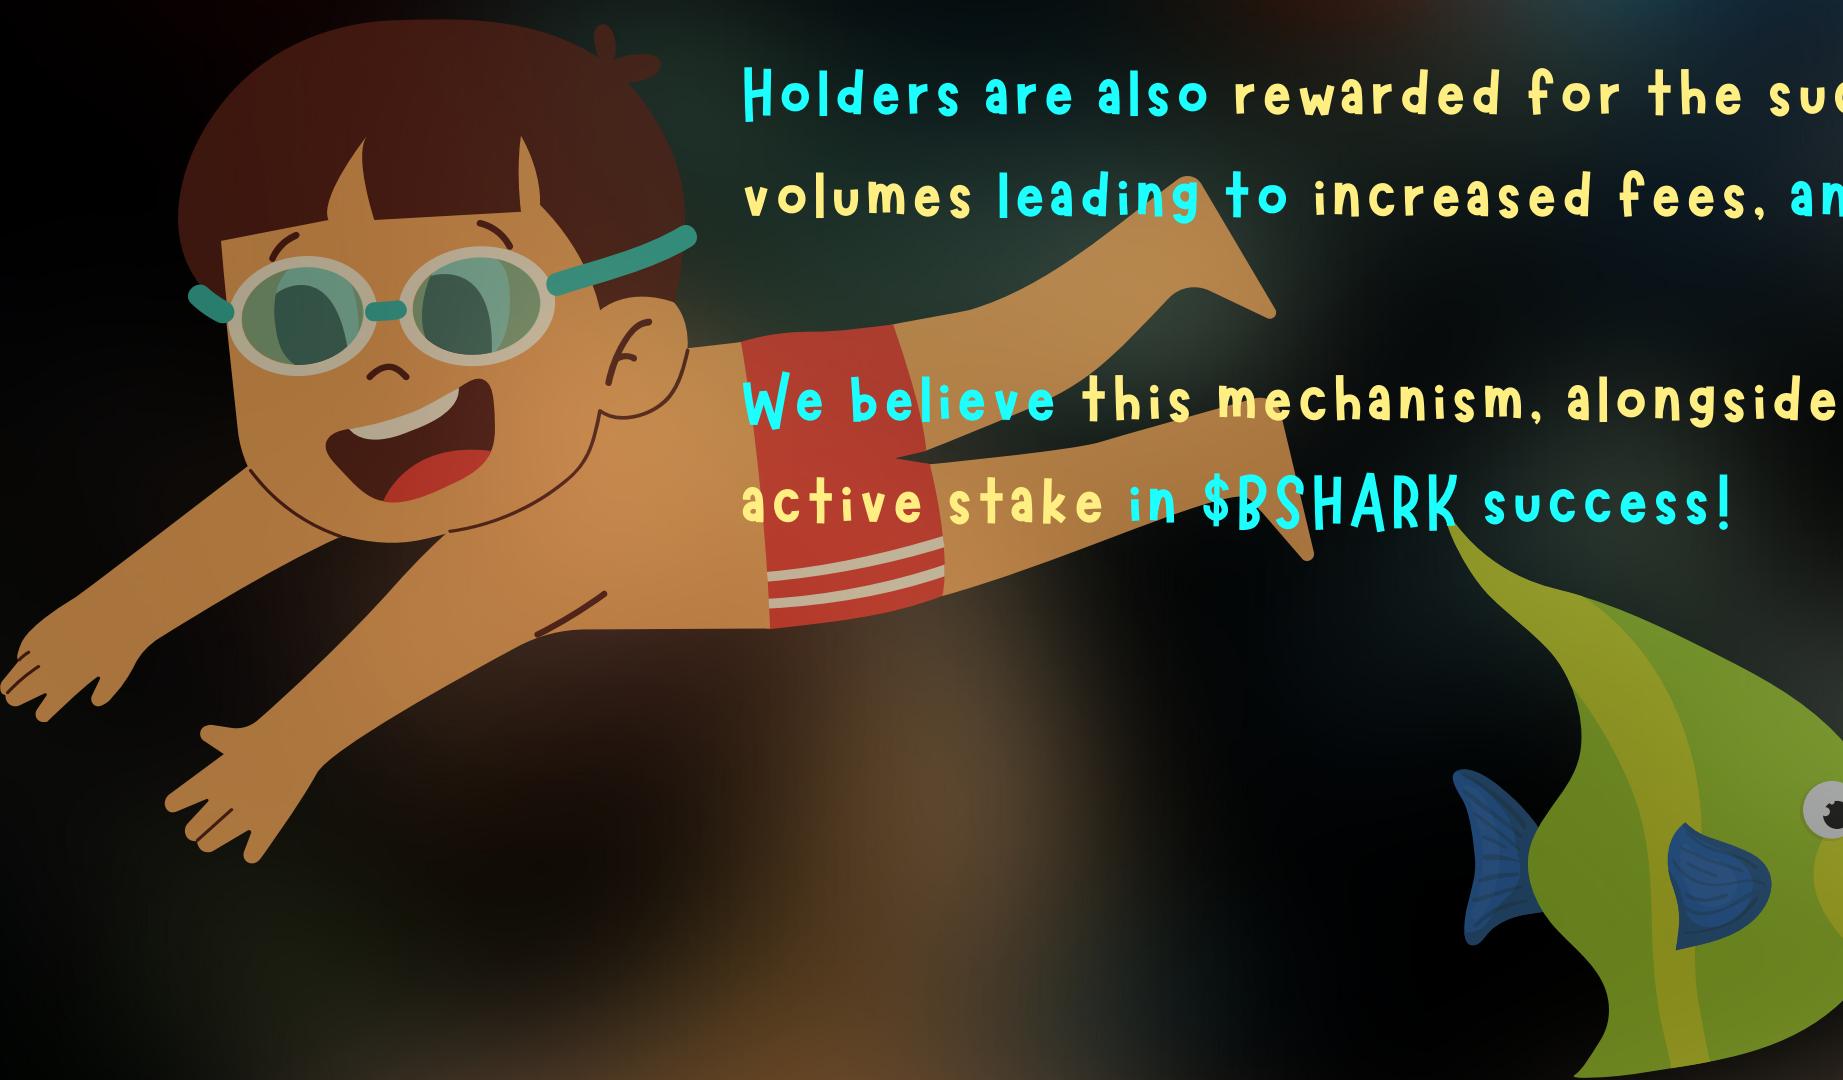

REFLECTION

KuBabyShark resides within a class of token that rewards investors just for holding. The amount of rewards received increases over time the longer an investor holds for.

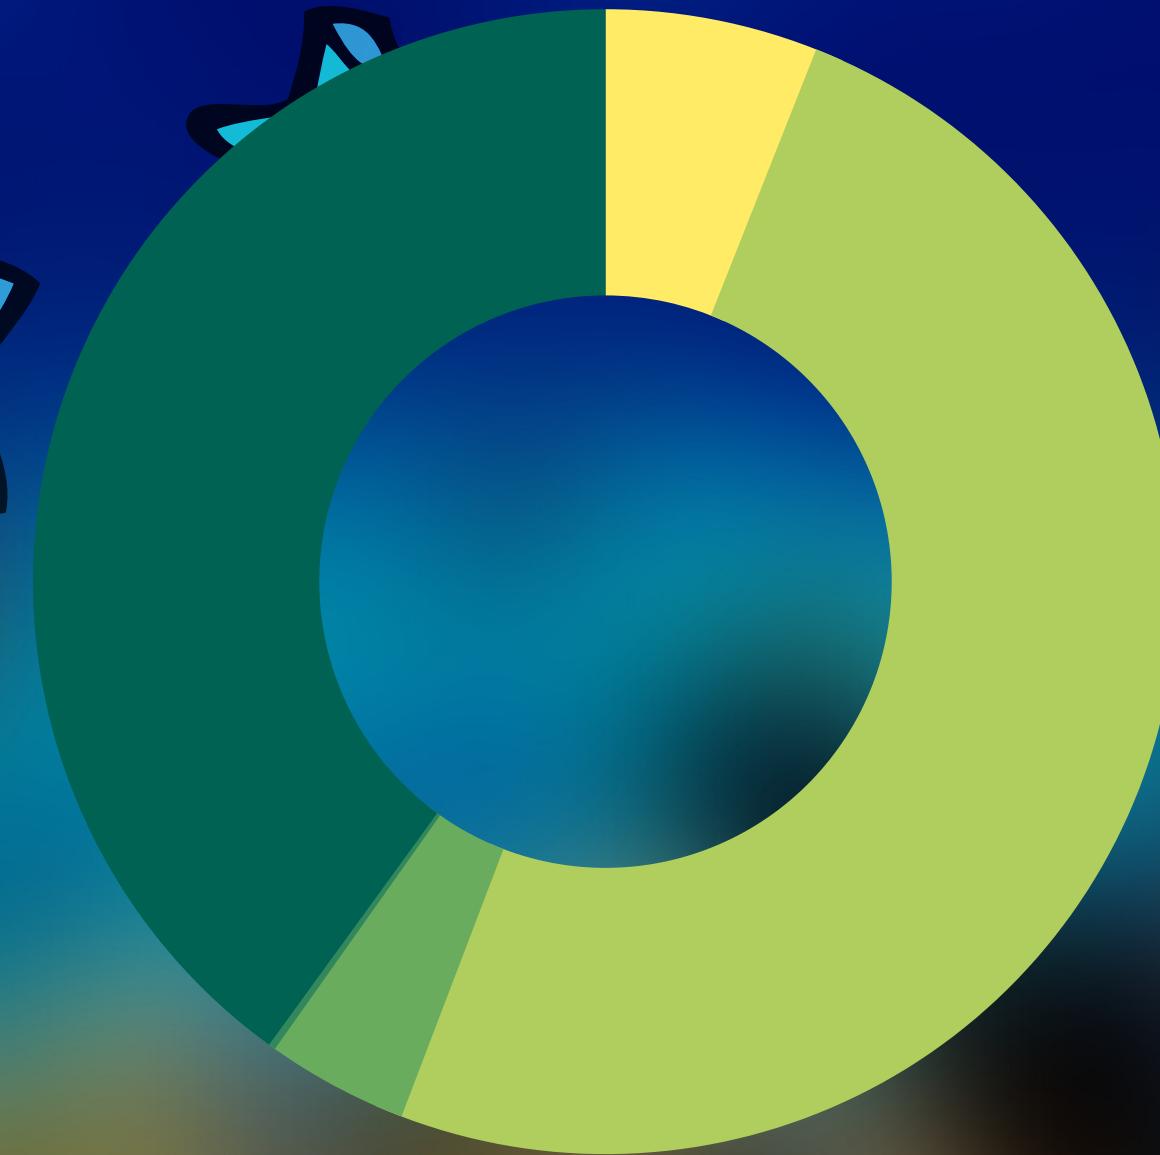

Holders are also rewarded for the success of \$BSHARK with higher transaction volumes leading to increased fees, and rewards for distribution.

We believe this mechanism, alongside others – provides investors with an active stake in \$BSHARK success!

\$BSHARK TOKENOMICS

- 6% PRIVATE SALE
